

Fit4 Software

The Ultimate Bespoke Orthotic Design Solution
Used by leading industry experts and universities

Fit4 is a cutting-edge CAD software designed to seamlessly integrate with your individual 3D foot scans and 2D pressure analysis systems enabling the creation of true bespoke orthoses with unparalleled precision. No more guesswork or outdated manual methods—our intelligent design technology ensures optimal accuracy and patient-specific solutions.

With Fit4, you can:

- Import 2D pressure plate data directly into the design process for precise offloading in the required areas.
- Eliminate human error—no need for manual marking or estimations.
- Tailor designs to exact specifications, ensuring a perfect fit for any shoe or sports footwear.

Advanced Design Capabilities

- Built on Rhino 3D for deep customization and advanced modelling.
- Full foot manipulation and bisection tools to achieve optimal foot positioning.
- Completely bespoke design freedom—not restricted by modular templates.
- Versatile design options including TPU style orthoses, traditional polypropylene or carbon fiber shell styles, rocker soles and more.
- Split Density Design functions allow the model to have areas of rigidity or flexibility throughout the device depending on prescription requirements.

FIT4 Software

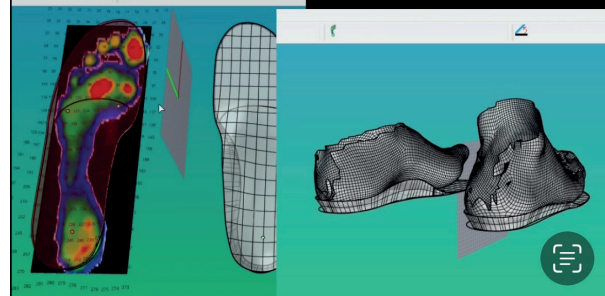

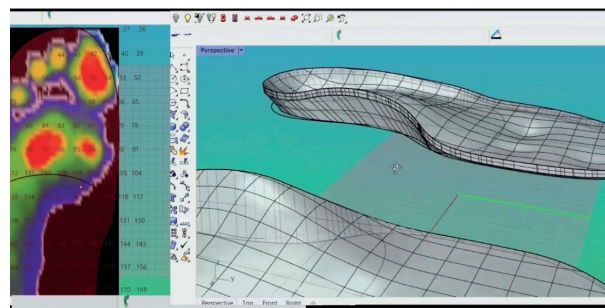

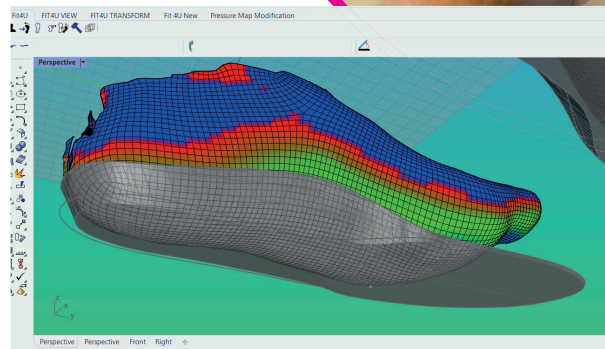

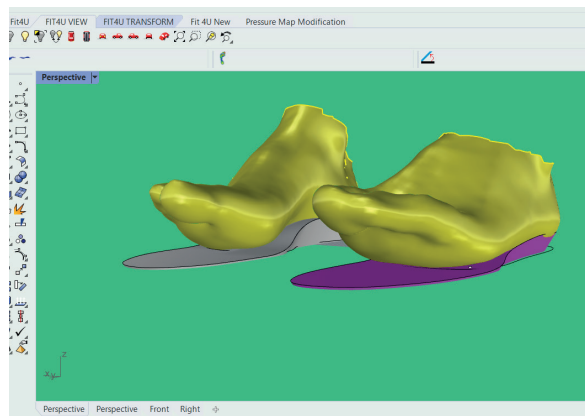

Seamless Workflow & Precision Engineering

- Design anything from scratch—traditional orthoses, rocker soles, carbon plates, bespoke footwear, accommodations, heel lifts and more.
- Quickly convert TPU designs to shell-based models with just a few clicks.
- Extensive, customizable library of specific accommodations or the ability to create unique designs.
- Export files effortlessly for 3D printing or CAD/CAM milling.

Why Choose Fit4?

- Say goodbye to frustrating Lab errors—design orthoses with exact width, size, and shape to match your patient's footwear.
- Ensure 100% accuracy by integrating pressure analysis data into your custom orthotic designs.
- Enjoy complete design flexibility—from simple insoles to complex full-length orthoses and beyond.

Fit4 is the future of orthotic design, offering complete control, precision, and customization to meet every patient's unique needs.

Training & Support

We provide comprehensive initial training to help you get started with Fit4. Additionally, we offer customized training programs tailored to your specific workflow and design needs. Our expert team is available to ensure you maximize the software's full potential.

Book Your Free Demo

Experience Fit4 in action with a free demo. See firsthand how our software can revolutionize your orthotic design process with precision, efficiency, and total customization.
